Funding: Penn State Center of Excellence in Science Education

Assessment Outline

- Goal: Measure learning outcomes of students upon completion of undergraduate statistics program (e.g. major)
 - snapshot of student learning outcomes
 - facilitate cohort comparisons for program evaluation
 - comprehensive scope
- Constraints
 - closely aligned to (2014) ASA Curriculum Guidelines¹
 - ease of use across institutions, instructors, years
- Outcomes
 - two capstone assessment tools (i.e., test & survey)
 - multi-year pilot
 - good psychometric quality

¹American Statistical Association Undergraduate Guidelines Workgroup (2014). 2014 Curriculum guidelines for undergraduate programs in statistical science. Alexandria, VA: American Statistical Association. http://www.amstat.org/education/curriculumguidelines.cfm

(2014) ASA Guidelines for Undergraduate Programs in Statistical Sciences

44 See Zhu et al. (2013) "Data acquisition and por-processing in studies on humans. What is not taught in statistics classes." The American Statistics, 67(4):23–241, which includes a series of statis. (1) age to have the tudy, (2) assess the validity of variable cooling. (3) assess data entry accuracy (4) perform data cleaning; and (5) edit identified data errors.

platform for data exchange, we do not recommend it as a primary analysis environment. 45 Appropriate environments could include R, Python, and SAS,

5 Appropriate environments ould include R, Python, and SAS, implemented by tools including nell scripts and knitr.

46 Futschek (2006) defines algorithmic thinking as a set of

abilities related to constructing and understanding algorithms. (1) Bild ability to enable a single properties (1) Bild ability to enable a single property and the related to the related

47 We define structured programming as the ability to use functions and control structures (e "for"loops). 48 This recommendation is consistent with the efforts of Connol Welfram and the Computer-Based Muth initiative, www.computerbased-rath.org and www.efriyout.com.tel wolfram. The incorporation of these tools may be particularly valuable at the bach-fact is level, since students will generally have less technical knowledge (and need to be able to simulate to generate insights and/ or check analytic results).

49 Students should develop the specialty tem insight for femals such as CN, ISON (IsoN (IsoN Cope) (Orich Nostins of a distribution) format the is easy to read, parts, and greents per folial and 16 might larg (2014) 3ML and 18 might larg (2014) 3ML (IsoN cope) 4ML (IsoN (Is

50 We are not prescriptive regarding which technologies are incorporated into the curriculum, as long as they are sufficiently fisoible and powerful. Many undergraduate statistics students develop expertis in environments such as RRStudio, Pathon, and SSS.

recommended.

52 Markov chains are a useful topic for undergraduate majors in

\$3 This linkage includes topics such as the delta method, in addition, many students might benefit from exposure to modeling and simulation in their mathematics control as a superior additional hole. data. Such skills underpin strategies for assessing and ensuring data quality as part of data preparation and are a necessary precursor to many analyses⁴³.

- Use of one or more professional statistical software environments⁶⁴
- Data management using software in a well-documented and reproducible way¹⁵, data processing in different formats, and methods for addressing miscing data
- Basic programming concepts (e.g., breaking a problem into modular pieces, algorithmic thinking⁶⁶, structured programming⁶⁷, debugging, and efficiency)
- Computationally intensive statistical methods (e.g., iterative methods, optimization, resampling, and simulation/Monte Carlo methods)⁴⁸
- Use of multiple data tools⁴⁹, so graduates are not wedded to one and are better able to learn new technologies⁵⁰

Mathematical Foundations

The study of mathematics lays the foundation for statistical theory. Undergraduate statistics majors should have a firm understanding of why and when statistical methods work. They should be able to communicate in the language of mathematics and explain the interplay between mathematical derivations and statistical applications.

- Calculus (e.g., integration and differentiation)⁵¹
- Linear algebra (e.g., matrix manipulations, linear transformations, projections in Euclidean space, eigenvalues/eigenvectors, and matrix decompositions)

- Probability (e.g., properties of univariate and multivariate random variables, discrete and continuous distributions)³²
- Emphasis on connections between concepts in these mathematical foundations courses and their applications in statistics⁵³

Statistical Practice

Strong communication skills complement technical knowledge and are particularly necessary for statisticians; graduates need technical skills to perform analyses and communication skills to understand clients' needs and then effectively discuss results and conclusions. Important practical skills include the following:

Comprehensive Undergraduate Statistics Program (CUSP) Assessment Strategy

- Test Blueprint (Link)
- 95 competencies cited in 2014 ASA Guidelines
- single assessment tool likely not sufficient

# Competencies	ASA Guidelines Topic
37	Statistical Methods & Theory
16	Data Wrangling, Computing, & Data Science
11	Mathematical Foundations
18	Statistical Practice
9	Problem Solving
4	Discipline-Specific Knowledge

Comprehensive Undergraduate Statistics Program (CUSP) Assessments

- Indirect assessment–CUSP Survey
 - inventory of all 95 competancies cited in ASA Guidelines
 - survey data self-reported by students
 - approx. 10-15 minutes duration
 - several cohorts from single institution
- Direct assessment-CUSP Test
 - selected response test
 - approx. 1 hour duration
 - multiple institutions w. single cohort
 - single institution w. multiple cohorts

Indirect assessment-CUSP Survey

Benefits

- Easy implementation
- Can be administered multiple times if desired
- No problem including topics we don't teach
- Includes demographics

Risks/Issues

- Reliability of self-reporting
- Over/Underconfidence with content exposure
- Indirect Assessment (Survey Link)

Excerpt

Statistical Theory

(scale: [1] very low / never learned; [2] low; [3] fair; [4] good; [5] very good; [6] excellent; [7] exceptional)

Please rate your current level of knowledge/competency related to:

1 2 3 4 5 6

Distributions of random variables

Example Use

- Indirect assessment tool (i.e., Survey) administered at key program milestones
 - first-year seminar
 - midpoint course(s)—if possible
 - beginning & end of capstone course
- informative for annual program evaluation data

Note to self

Dear Future Matt:

This is a great place to pause for questions or comments from the group!

-Recent Self

Direct assessment-CUSP Test

- Selected response assessment tool with broad coverage
- 33 tasks; some with multiple parts
 - 9 testlets
 - 24 conventional MC questions
- several tasks/subtasks assess multiple competancies
 - score adjustment for successive competancies (1, 1/2, 1/4, ...)
 - 86 points possible
- some tasks adpted from other instruments (with permission)
 - 2 from the REGRESS assessment²
 - 9 from the CAOS assessment³

²Enders, F. (2013). Do clinical and translational science graduate students understand linear regression? Development and early validation of the REGRESS quiz. *Clinical and Translational Science*, *6*(6). p. 444-451.

³delMas, R., Garfield, J., Ooms, A., Chance, B. (2007). Assessing students' conceptual understanding after a first course in statistics. *Statistics Education Research Journal*, *6*. p. 28-58.

Excerpt (partial item)

driver or passenger side

Study design dictates appropriate statistical analysis, but often there is more than one reasonable approach to				
the analysis. Evaluate whether each of the following analysis suggestions is VALID or NOT VALID for testing				
and estimating the difference in durability for the two brake pad materials:				
	Valid	NOT Valid		
paired t-test for brake pad difference of each car (DriverSide - PassengerSide)	0	0		
paired t-test for brake pad difference of each car (Experimental - Standard)	0	0		
ANOVA with car as a blocking variable	0	0		

CUSP Test

Benefits

- test statistical "reflexes" of students
- built-in "CAOS" subtest
- objective measure of student competancies
 - for individual students
 - for a cohort of students
 - aggregate useful for program evaluation
- Easy implementation

Risks/Issues

- Variable use conditions may jeopardize comparisons
- Scope constrained by test fatigue
- Includes topics we don't necessarily teach
- Longer to implement

Example Use Cases

Penn State

- Indirect assessment tool (i.e., Survey) administered pre & post (in addition to first-year students)
- Direct assessment tool (i.e., test) positioned as a midterm in the capstone course
- benchmarking student skills and competancies against ASA Guidelines
- allows several weeks to address areas of need prior to graduation
- useful for annual program evaluation data

Other Institutions

- no course credit
- homework, extra credit, etc
- typically open notes

Note to self

Dear Future Matt:

Sorry to interrupt again—especially since it really wasn't even funny the first time—but I can't resist pointing out another great opportunity to pause for some discussion!

-Recent Self

Preliminary Item Functioning Analysis

- Benchmarks for item statistics⁴
 - Unidimensionality assumed by common methods of assessment evaluation
 - Cronbach alpha (reliability)
 - descrimination > 0.15 preferred
 - 0.6 < proportion correct < 0.9
- Results
 - PCA evidence supports unidimensionality
 - Cronbach alpha = 0.81
 - 30/33 items with discrimination > 0.15
 - 9/33 items in recommended difficulty range
 - 21/33 items with > 50% correct

⁴Haladyna, T. M., & Rodriguez, M. C. (2013). *Developing and validating test items*. Routledge: New York.

Item discrimination

- Item discrimination < 0.15
 - (21% correct) Validity of models aligned to a study design
 - (3.6% correct) Strategies to maximize likelihood
 - (40% correct) CAOS task about CI interpretation
- Best item discrimination
 - (discrim = 0.59) Probability distributions task
 - (discrim = 0.50) Histograms & std deviation task
 - (discrim = 0.46) OLS regression assumptions task

Q20. Choose the **most** appropriate probability distribution from the list below for each of the scenarios described. Each distribution may be used more than once or not at all.

\boldsymbol{X} = how many of the next 20 cars that pass you on the highway are silver colored.	Binomial 💠	
\boldsymbol{X} = how much time until the next diet coke is purchased from a vending machine.	*	
$\boldsymbol{X}=$ birth weights of infants born within one week of their due date at a given hospital.	*	
X = the total number of goals scored during a randomly selected match in the FIFA World Cup soccer tournament.	/ Bernoulli	
Seckman (2018) No part of this work may be copied or distributed without written consent of the	Binomial Continuous Uniform Discrete Uniform Exponential Geometric	

Future work

Shorter term goals

- Streamline logistics for wider implementation
- Link CUSP Survey data to CUSP Test outcomes
- Expand item bank

Longer term goals

- Experimentation with short/long forms
- Alternative or additional tools for more complete alignment to ASA Guidelines
